

CALPICO T-CAPS

PRE-FILLED THERMITE WELD CAPS

COMPONENTS:

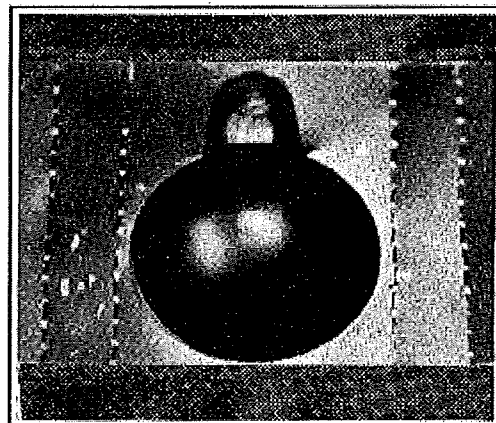

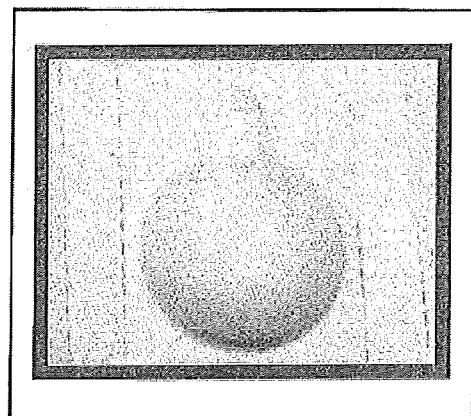

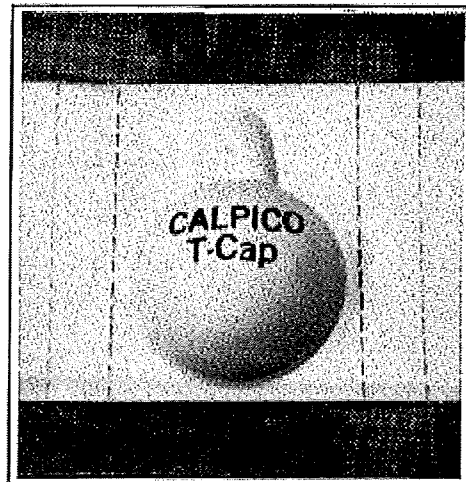

- Plastic igloo outer cover.
- Highly adhesive synthetic elastomer backing which adheres to metal.
- An igloo filled with a soft rubberized compound to flow around the weld and wire.
- Overall thickness: 125 mils.

TO SEAL MODEL T-CAPS:

Remove the release paper and press it manually over the thermite weld.

Normal size of T-Caps is 4"x 4" square; Larger and smaller sizes are also available. Calpico T-Caps are ideal for covering the welds made on jumper cables, or when attaching anode wire to pipes or fittings.

Calpico T-Caps can be applied from 20°F to 130°F, with an operating temperature of -40°F to 180°F. It is advisable to apply Royston Spray before applying the T-Caps.
